

LAUDAVISTA

Foreword:

Welcome to LAUDA VISTA file manager.

This handout serves as an introduction to the database on the one hand, and provides you with instructions for use on the other.

A few general notes to begin with:

This online database is designed for the Microsoft Explorer browser. Other browsers as Netscape version 4.7, as well as Mozilla 1.2 should display good results. Some errors may, however, occur when using Netscape version 4.5 or 6.0 or later due to the nature of the browser; it is therefore better to use Explorer to access the database and thus ensure proper functioning.

In addition, do not be surprised if you cannot access certain pages or links. This is because some users are only assigned limited access authorisation. For example, links/buttons for downloading or ordering will not be displayed to a “guest”.

We hope that you will find your way around without any problems and that this will make your work a bit easier.

Please, enter your ordering password:

3. Search Functions

3.1 General Search

You can only look for a certain term in the General Search, e.g. all image data in the “ecoline” category or with file name “121_0009” or photos of “thermostats”. You only have to enter part of the search term e.g.: “eco...” or “121_0...” “Sort” allows you to specify the criteria according to which the search result will be displayed. You do not, however, have to specify anything here.

Another hint for general search:

In case you can't find what you're inquired you may use an „_“ (Underscore) as an alias for only one sign, use „%“ as an alias for various signs, you don't know.

Example:

You're searching for a certain product, but don't know how it's exactly written in the database.

Enter as much from the file name you know or suppose and put in the tips from above. This should help.

Search

3.2 Detail Search

“Detail Search” allows you to search for several picture properties. You can look for and combine the relevant properties with each other using pop-up fields e.g.: the combination Type: “A112T” and View: “Group Picture” will display all group pictures featuring appliance A112T.

As you can see, you do not have to complete all fields. It is enough to define just one or two.

For the “File name”, “Type” and “LAUDA Cat. No. :” fields, you have to enter the required values yourself, because there are too many different values here.

Search	

▶ 3.3 Category Search

You cannot specify any properties in the “Category Search”, but you can click your way through the folders to the image you want, just like in Windows Explorer. Select the folder you wish to open and click on “Text”, “Picture” or “Gallery” to specify how you want the data records to be displayed.

List with preview images

4.1 List View

In the first field "add" you can mark the pictures you would like to send to the shopping basket. Using the "quality" pop-up menu at the end of each line you can select which data you want to order or download. "High" – for high resolution pictures approx. 20-90 MB. "Medium" – for medium resolution data of approx. 2 MB which could be used for PowerPoint presentations or for layouting.

"Low" – for very small data of around 120 KB. These are the pictures that will be displayed in the detail view. Once you have made your selection, confirm it by clicking "add to order" at the bottom of the page. This will send the selected images on this page to the shopping basket. To get to the detail view, click on the picture in the "preview" field or on the file name in the next field.

4.2 Detail View

Clicking on the picture symbol or file name in the list/gallery view will display the detail view for the respective data record. This will provide you with detailed information about the picture. Furthermore, you have the option of sending the picture to the shopping basket ("order") or to see an enlarged version of the picture in "big pre-view".

At the very bottom you will find another list of "similar files", which have the same or similar technical properties, or which are in the same folder.

5. Download

The “big preview” link will provide you with a large screen-size view of the medium resolution data that can be used for PowerPoint presentations. In order to download this picture, right click on the image and select “Bild speichern unter” [Save picture as] from the menu. The picture will be saved to your computer.

If you use a MACINTOSH computer, hold down the “ctrl” key and then click on the picture. Now select the command “Download picture onto data media” to copy the picture onto your computer.

Please note: pictures downloaded in this way are in RGB mode with 72dpi and are primarily intended for layouting or PowerPoint presentations.

6. Ordering Data

6.1 Shopping Basket

Once you have finished selecting your pictures, go to the “Your order” page. Here you will once again see all the pictures you have chosen and can update your selection by deleting any pictures you do not require from the shopping basket.

You now need to enter your ordering password. A check will be carried out to determine whether or not you are authorised to order high resolution pictures. Confirm your entry with “continue” to get to the next page.

If you are not authorised to order pictures, please contact the following address:

Delete all

To continue with your order, a special ordering password is necessary!

Please, enter your ordering password:

continue

Another note regarding the file format:

A large amount of high resolution data is saved in EPS format with JPG compression. You can open EPS files with all current, well-known image and graphics programs.

6. Ordering Data

6.2 Ordering

The final step is the order form. Please state your delivery address here and how you would like the data to be sent. We send data

- on CD
- via ISDN
- by e-mail.

Please note:

We send our data on CD or via ISDN (Leonardo ISDN card) as standard.

All image data is available in EPS format with JPG compression; i.e. the pictures are already compressed.

ISDN:

If the data is, however, bigger than 50 MB, we would recommend that you have it sent on CD because ISDN transmission would take too long.

E-MAIL:

When sending by email, we compress the data once more in JPG format. If the data is still bigger than 5-10 MB, it should only be sent by email if you have DSL or faster.

Order formalities:

- LAUDA checks your order before data is dispatched
- Orders within Europe are sent directly by elmar hahn studios.
- In the case of orders from non-European countries, data is sent by LAUDA.
- Lauda covers the cost of this service

Your order password was accepted:

Order form

Size of total chosen pictures: 41 MB.
Your order will be released by LAUDA before shipment.
The way of dispatch depends on the size of the pictures (see below).

Costs and Dispatch:

The costs of this service are paid by LAUDA. However there is a limit per company.

Way of Dispatch:

☐ CD-Rom (no limit) 

☐ ISDN (<50 MB) 

☐ E-Mail(<5 MB) 

To avoid any delays fill in the form completely!
